

to take forward the quiz for the next top five.
For the next five questions, the power play and the slog
over's welcome my opening partner, Dr. Kunal.
So now we move to the next five questions
and be ready to cover up for whatever losses you
have made in the first five.
We move to the sixth question.
Which of the following is true regarding the trial
with studied subcutaneous versus intravenous amivantamab?
Are the options?
PFS was the primary endpoint, subcutaneous group
had higher infusion reactions.
OS was longer in the sub-cut group
or was it a phase three superiority trial.
Which of the following is a true statement?
I think everyone looks comfortable with the question.
Yes.
So 13 people got the right answer.
The right correct answer is overall survival
was longer in the subcutaneous group.
One of the very rare trials which showed
OS advantage with one of the formulation
which was subcutaneous.
And the standings are maintained.
Karam will stand on the first position.
We move to the next question.
Dr. Putamab directs to connect against which target.
There are four options, Nectin IV, drop two, tissue factor
or her two.
You will see a lot of antibody drug conjugates question
in the quiz also and probably in the exams also.
So we have 26 who have answered it correctly.
And the answer is drop two.
And the podium position stands still.
We move to the next question.
Eighth.
What was the drug used?
And what was the primary endpoint
in the Harmony 2 trial?
So there are two drugs and two endpoints.
So you have to choose the correct drug
and the correct endpoint of the trial.
So majority of you entering it correctly,
the drug is even a schema for PFS.
Inaolecip was added purposefully because it
sounds the first three letters are very similar.
And the podium position still remains same.
Karam will followed by Dr. C3 and Dr. Vishav.
So now moving to the last two questions.
Which of the following is a C-MAT directed antibody drug
conjugate?
As I told you, you will find a lot of questions for ADCs.
Is C-MAT directed ADC?
I am not calling out the names because it's difficult.
So the correct answer is telliso to sum up widoting.
22 people have answered it correctly.
And let's have a third standing.
Right before we move to the last question, Karam Vir,
in the lead followed by Dr. C3 followed by Vishav,

followed by Vanktesh and Priyanka.
The podium places are covered by just 200 points.
Last ball six, or is it going to be like Surya Kumar,
long off, long off, long off, moving on to the last question.
Question number 10.
Person on the fourth has a chance to come on third.
So move to the last question.
What was the rate of pathological complete response
in keynote 671?
That is the use of perioperative pembrolizumab.
I think this is the easiest question out of the 10.
If you have read the trial correctly
and attended the conference also.
So the rate of PCR in keynote 671.
That is perioperative pembrolizumab
in the detectable non-small cell lung cancer.
So only 10 got it right.
So moment of truth as to who are going to be the finalists
to win the lung, ear and review quiz.
And your podium positions, and remember,
this may still change even though you are on the podium
position because we are going to be inviting teams.
And your top three are in third place with 6,565 points
as Dr. Sichri.
In second place is Dr. Vishav.
And winning with nine questions out of 10
with a superb strike rate is Karam Vir.
Right.
You're from which college?
RCC do you have a teammate?
Yeah, you can call your teammate as well on stage.
Dr. Karam Vir, just hang on there.
Right. And Dr. Sichri.
Sichri and who is Dr. Vishav?
Vishav and Karam Vir, all of you are the same team.
So we will have to look at someone
who would come who has come forth as such.
So can we look at the report?
So if I'm to understand Dr. Karam Vir and Dr. Vishav,
you're part of the same college, right?
All right.
Dr. Sichri has a teammate in RCC, Dr. Bhagna.
Right.
Dr. Bhagna, you can choose your teammate
and you can come on stage.
Right.
Gentlemen, if you can just have the organizers put
two to chairs on the stage,
we will give the top place team.
Karam Vir and Dr. Vishav, you can choose where to sit.
When we used to do quizzing,
we used to believe in quizzing vasto,
that way if we sit in the middle, we get easy questions.
If you sit in the top, all the difficult questions come,
but where you sit really doesn't matter in this quiz.
As you will figure out, keep it slightly apart
so that teams need not two people per team.
Put it here.
We need someone to help with the scoring

if we can have Dr. Akil to help us with the scoring there.
You can sit there and you can just write down the scores
so that later on they don't come after the quiz masters
but they'll come behind you.

Right.

So this is team A, team B, team C.

Dr. Chandrokan can also assist him and help him out
so that we have two people who no one would dare
to come and fight against.

Right.

So team A, please introduce yourselves.

I am Dr. Bhavnathaya.

I am from Kilpok Medical College, Chennai.

I am Dr. Sai Lakshmi.

I am from Kilpok Medical College, Chennai.

I am Siddharth from Region Against Senator Vantram.

I am from RCC.

Karamil from Bhagawanma, Virkincer Hospital, Jaipur.

Vishvakan from Bhagawanma, Virkincer Hospital, Jaipur.

Right. You have a big round of applause to all the finalists
and all the participants and as you can see,
it was indeed a tough round.

So we are going to have four rounds.

We are going to start off with a history and trivia round.

Always important to remember the legends and the history.

This is followed by a visual round

and then there is a general round

and in the last is my favourite round,

the Casino Royale.

All right. OK.

Over to Dr. Kunal to start off round one and explain the rules.

So can we have the slides for the round one?

Yeah. So the first round is the history of the trivia round,
which is, which I have called as the Palmonary Past.

And there will be three questions.

Next slide please.

Yeah.

So there will be a single question to each team
and there will be no passing allowed.

So there will be a single question to each team
and no passing allowed 100 points plus 100
if you answer it correctly.

If you ask for a clue, you will get plus 50
and there is no negative marking.

Thank you.

So these are the rules.

Any doubts?

Yeah.

OK.

That's it.

OK.

That's it.

OK.

So we will begin with first question to team A.

You ready?

So this words, Ron Miller, two way down,
stellar, curtrosal and CIA Mobley.

These were the last words of which celebrity who died of lung cancer.

You have got 30 seconds to respond.

You can leave.

OK.

Team one upfront opts for the clue.

So he holds the record for the most academic awards,

won by an individual around 22 and 4 honorary ones.

And if you want to have a look again,

then these are the four things which he has said.

Something related to academic awards and dreamy stuff.

These are the closest I can get.

Ten seconds left.

Most number of academic awards.

OK.

So the correct answer, anyone from the audience?

OK.

The correct answer is Walt Disney.

Yeah.

So we move to the next question to team B.

Team B already.

A gene was named after this gentleman.

I am not asking the name of the gene.

I am asking the name of the gentleman.

Clue.

The clue.

So again, someone would ask what is the clue in this,

but you have to look inside this picture.

There is, I think, one or two words.

Just behind the head of the person.

Something is there.

So if you know the full form of the gene,

you will get this right.

Very obvious his head is blocking out the full word.

So there are two words, M-E-B and coma.

So the heat lies in one of these two.

If I have to make it more easier for you,

then the clue lies in the coma word.

It is hiding the head is hiding the word.

It's something before.

Ruse sarcoma.

I was the first name of that person.

Kirsten.

Correct.

So plus 50.

Give a big round of applause to team B.

They made sure they did not go into coma and sing this question.

And it was indeed the Kirsten Ruse sarcoma.

So the scorers opening the account team B with 50 points.

And now to the moment of the last question.

Question 3 for team C.

Identify this Austrian-American gentleman after whom guidelines were named.

So all the teams opting for the clue.

Okay, this is your clue.

So this clue, sign in radiology is named after him.

So you have to identify what is this and what is there in the x-ray and what sign it could be possibly.

So the guidelines and the sign both are named after this gentleman.

Very, very few things in lung cancer.

Few very few guidelines are named after a person.

So you just have to think out of the box.

It might not be always the treatment guidelines.

Ten seconds left.

No negatives.

Take a shot.

None of us are coming as your YY examiners.

Decker.

Sorry.

Decker.

No.

So any guys from the audience?

Imaging guidelines, x-ray guidelines, thoracic radiology guidelines.

Okay.

So the correct answer is fleshener, fleshener guidelines and fleshener society.

And this is the fleshener sign that is the prominence of the central pulmonary artery which is seen in pulmonary embolism.

So at the end of round 3, we have got only a score from team B I think plus 50 and rest of the teams are yet to open.

They count.
